Part 1 MC Mark _____ / 12

Part 1 SA Mark _____ / 10

Part 2 LA Mark _____ / 38

Total _____ / 60

Instructions

There are two parts to this exam with different instructions for each. Please read carefully.

Part 1 – Closed-Book (22 marks)

Multiple choice (12 marks: 1 marks per question). Complete all 12 questions by marking your response on the paper.

Short answer (12 marks). Complete all 5 questions by marking your response in this exam booklet.

After you have completed Part 1, hand in your paper in order to begin the Open Book portion. You may not return to Part 1 after you hand it in.

Part 2 – Open-Book (38 marks)

Long answer (38 marks): Complete all parts to the questions for Part 2 by marking your responses on the exam paper. This portion of the exam is open-book and open-notes. Laptops and tablets are permitted but must be disabled for communication and access to the internet.

NO COMMUNICATION DEVICES!

Part 1A: Multiple Choice (12 Points)

Answer all 12 questions. Each is worth 1 mark. Choose the single best response – a given question may have more than one choice that is correct but marks will only be given for the *best* answer.

1. What is the best description of the type of motion between the teeth of two properly meshed bevel gears?

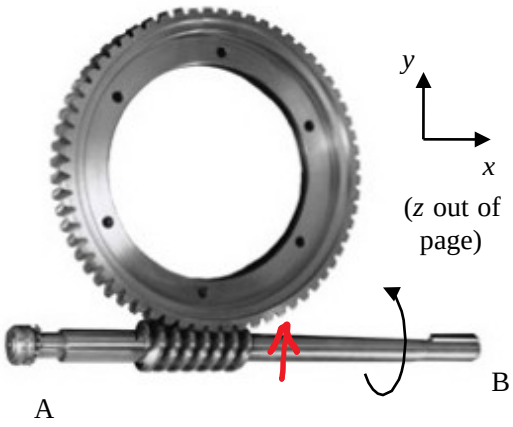

a) Purely rolling
b) Purely sliding
c) Some rolling when teeth engage and disengage, but predominantly sliding
d) Some sliding when teeth engage and disengage, but predominantly rolling
e) Approximately equal parts sliding and rolling

2. For properly meshed worm gears which of the following statements is FALSE?

a) The magnitude of the axial force on the worm is the same as radial force on the gear
b) The magnitude of the radial force on the worm is the same as the radial force on the gear
c) The magnitude of the axial force on the worm is the same as the tangential force on the gear
d) The magnitude of the tangential force on the worm is the same as the axial force on the gear
e) The magnitude of the friction force on the worm is the same as the frictional force on the gear

3. **The worm gear shown has a 1.5" pitch diameter and has two threads. The gear has a 7" pitch diameter and 80 teeth. If the worm turns 20 revolutions in the clockwise direction indicated, how far does the gear turn?**

a) ¼ rotation clockwise
b) ¼ rotation clockwise
c) ½ rotation clockwise
d) ½ rotation counter-clockwise
e) 4 rotations counter-clockwise

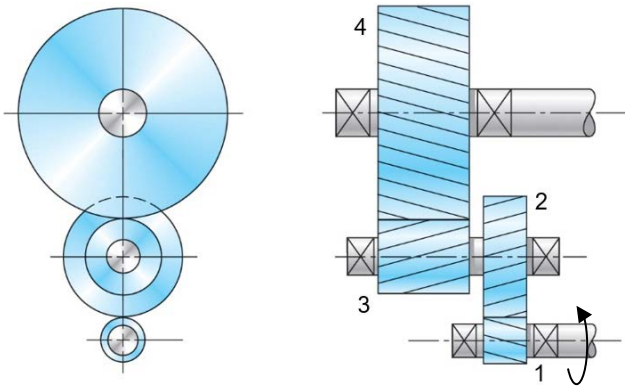

4. Which of the following types of gears allows for the shafts to be offset and non-intersecting?

a) Bevel
b) Spur
c) Worm
d) Hypoid
e) Helical

5. A helical gear has a 20° pressure angle, a helix angle of 15°, a diametrical pitch of 8 and 20 teeth. What is the diameter of the gear (in inches)?

a) 2.0
b) 1.5
c) 2.5
d) 3.0
e) 4.0

6. For the gear train shown, Gear 1 is the driving pinion and has 15 teeth, Gear 2 has 32 teeth, Gear 3 has 24 teeth and Gear 4 has 75 teeth. An 1800 rpm motor is driving the gear 1 in the <u>Clockwise</u> direction (as shown). What is the speed and direction of the output shaft?

a. 200 rpm clockwise
b. 200 rpm counter clockwise
c. 270 rpm clockwise
d. 270 rpm counter clockwise
e. 540 rpm clockwise

7. The motor attached to the gearset in Question 4 above is rated at 750 Watt. What is the torque on the output shaft?

a) 13.3 N-m
b) 19.9 N-m
c) 26.5 N-m
d) 35.7 N-m
e) 53.1 N-m

8. The term *"Post-Extreme Horespower"* refers to the following:

a) The breaking strength of a synchronous belt
b) The power rating for a chain where roller fatique or excessive wear are the modes of failure
c) The power rating for a chain where link fatigue failure is the primary mode of failure
d) The maximum horsepower rating for a chain
e) The smallest degree of lubrication

9. A V-belt drive has a driving pulley operating at 200 rpm, a drivetrain value of e = 0.25, a nominal power of H_{nom} = 1.0 hp, a service factor of K_s = 1.5, and a design factor of n_d = 1.25. TWO belts are to be used in parallel. The following belts are available in the catalogue. Which is the smallest belt that will satisfy the design requirements?

a) Allowable power H_a = 0.7 hp
b) Allowable power H_a = 1.1 hp
c) Allowable power H_a = 1.5 hp
d) Allowable power H_a = 2.9 hp
e) Allowable power H_a = 5.7 hp

10. Which of the following statements regarding gears is TRUE?

a) Spur gears can take higher loads than helical gears
b) Helical gears can never be used for right angle drives (shafts 90°)
c) Lower pressure angles allow for higher transverse forces between gears
d) Pinions with only 10 teeth can be used with a rack
e) Miter gears are a form of helical gears

11. Rank the following flexible drives from lowest to highest power capacity. Assume approximately equal dimensions and operating conditions.

a.	V-Belt	Flat belt	Roller Chain
b.	V-Belt	Roller Chain	Flat belt
c.	Flat belt	V-Belt	Roller Chain
d.	Flat belt	Roller Chain	V-Belt
e.	Roller Chain	Flat belt	V-Belt

12. When specifying the working load of wire rope, which of the statements is FALSE:

a. one must consider the modulus of elasticity of the wire rope
b. one must take in account the maximum allowable bearing pressure of the wire rope on the sheave
c. one must consider the application in order to specify a safety factor
d. one must determine the maximum sheave diameter
e. one must consider loads caused by sudden stops and starts

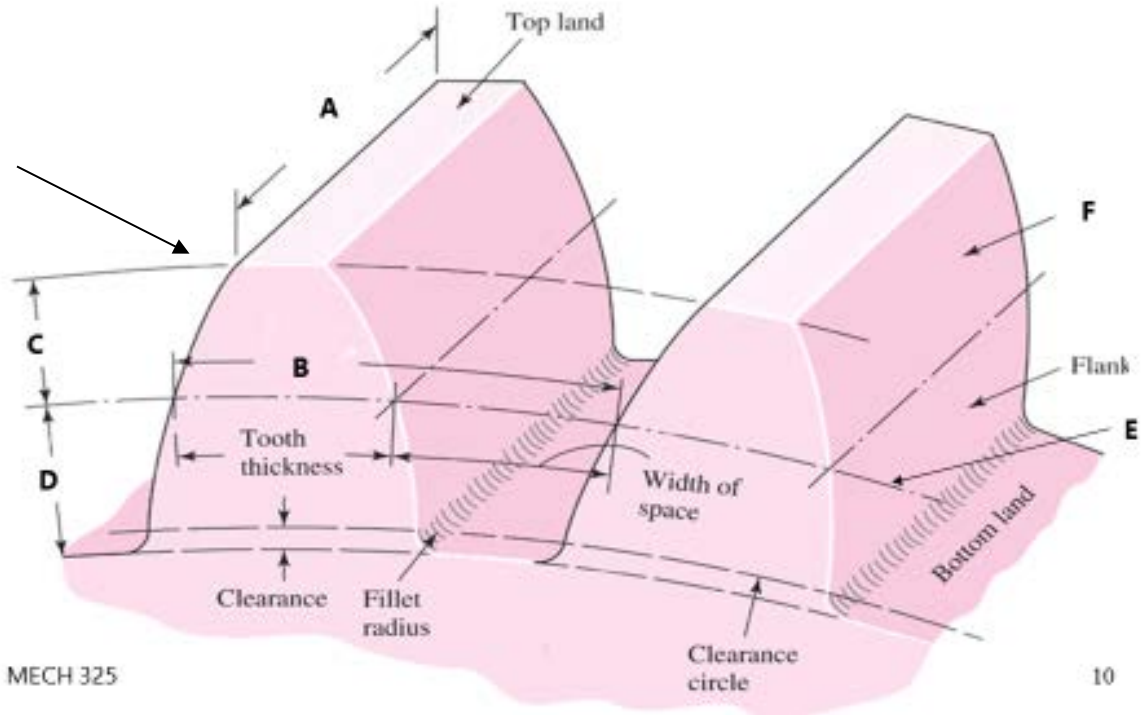

13 (Bonus) To convert from ft-lbs/min to horsepower use the following conversion

a) Multiply by 33000
b) Divide by 33000
c) Multiply by 550
d) Divide by 550
e) Divide by 454

Part 1B – Short-Answer Questions (10 marks)

Answer all questions in the spaces provided.

1. Name the SIX missing terms (A through F) related to spur gears (3 marks).

2. Which of the above terms are important for stress analysis of the gear teeth? Why ((3 marks)?

3. What are the advantages of V-belts over chain drives? Are there any disadvantages? (2 marks)?

4. What is meant by "through-hardening?" What is meant by "case-hardening?" Which one is preferred for highly loaded gears? Why (2 mark)

Instructions

Open notes and texts are allowed. Laptops are allowed but all communication features must be disabled.

No Communication Devices Allowed!

There are **Two** Problems to complete.

Part 2 – Open-Book (38 pts)

Long answer: Complete all parts to the question by marking your response in the pages provided. This portion of the exam is open-book and open-notes. **At the end of the exam, return this handout with your answers in the booklet.**

This is a multi-part problem. For each part, use the parameter values given. If you cannot complete one part, you may assume some values and move on in order to receive marks for subsequent parts. Clearly indicate your final answer to each part by drawing a box around it. Separate different parts with a line drawn across the page.

Long Answer Problem (38 marks)

Problem 1 (16 Marks)

A V-belt system is required to attach an electric motor to a heavy conveyor belt. The following information relates to the equipment

Driver	AC Motor (High Torque)
Driven Machine	Heavy Conveyor
Service	8 hours/day
Input Speed	1160 rpm
Input Power	50 HP
Output Speed (Nominal)	600 rpm
Minimum Centerline Distance	30 inches

Select a suitable V-belt belt system for the application. Specify the belt size, sheave sizes, and number of belts. What is the actual conveyor speed and final center distance? What is the safety factor for this system?

Problem 2 (22 Points)

Part 1 of 3

(8 points) A straight bevel gear pair is required to drive a reciprocating pump (moderate shock). The pinion has N_P = 20 teeth, P_d = 10 teeth/inch, 20° pressure angle, and face width, F = 1.00 inch. The pinion is driven at 1750rpm by an AC motor (normal torque) delivering 10HP. The recommended life for the machine is 1500 hours of operation. Assume the pinion is outboard mounted (cantilevered) and the gear is straddle mounted and both are of commercial gear quality (A_v = 8, Q_v = 9).

Design a set of bevel gears for this application.

Note: you can choose imperial or metric units

Driver	AC Motor (Normal Torque)
Driven Machine	Pump (Reciprocating)
Service Life	1500 hours
Input Speed	1750 rpm
Output Speed	580 rpm (nominal)
Input Power	10 HP (7.5 kW)
Pressure Angle (Normal)	20°
Diametrical Pitch	10 teeth/inch (module = 2.5 mm.)
Face Width	1.00 inch (25mm.)
Pinion	20 teeth
Gear	? teeth

Determine the following:

a) Given 20 teeth for the pinion, select a gear and determine the gear ratio (velocity ratio)
b) The pitch diameters and associated cone angles
c) Pitch line speed
d) Determine the tangential, radial, and axial forces for the gears. Determine these based on the pitch diameters and not the average (mean) diameter. You will need these for part 2.

Part 2 of 3

(9 Points) Determine the AGMA **bending** stress number for the 20 tooth **pinion ONLY**.

Given:

Driver	AC Motor (Normal Torque)
Driven Machine	Pump (Reciprocating)
Service Life	1500 hours
Input Speed	1750 rpm
Output Speed	580 rpm (nominal)
Input Power	10 HP (7.5 kW)
Pressure Angle (Normal)	20°
Diametrical Pitch	10 teeth/inch (module = 2.5 mm.)
Face Width	1.00 inch (25mm.)
Gear Quality	$A_v = 8$ (Q = 9)
Material for Pinion & Gear	Steel
Pinion Mounting `	Outboard (Cantilevered)
Gear Mounting	Straddle (bearings on either side of gear)
Overload Factor	**$K_o = 1.50$** (uniform power source and moderate shock)
Pinion bending stress number	s_t = ?

Part 3 of 3

(5 points) Select a suitable through hardened steel for the **pinion**. Specify the alloy and heat treatment.

The gear is expected to operate for 1500 hours. Define your expected reliability and temperature factors.

What is your safety factor for the pinion bending stress? Assume the same material will be selected for the gear.

Comment on the selection of the proposed bevel gears. Is the analysis complete?
